FastLED Four Glass Jars Construction Instructions

To make each of the four glass jars with a 8X8 WS2812b matrix, use the following step by step instructions:

1. **Cut the top Ziploc off of a sandwich size Ziploc baggie (see picture3 #2).**
2. **Insert the 8X8 WS2812b matrix in the baggie (see picture #3).**
3. **Place the matrix in the baggie into one of the pint size Mason jars (see pictures #4 and #5).**
4. **Slowly add the fire pit glass, a small amount at a time. Be careful not to get any of the fire pit glass into the baggie with the matrix (see picture #6).**
5. **Fill the Mason jar to the top with the fire pit glass (see picture #7).**
6. **Take the inner lid from the Mason jar and use it as a template to draw a circle on a piece of this cardboard (see picture #8).**
7. **Cut the circle from the cardboard (see pictures #9 and #10).**
8. **Cut a small amount of the outer circumference from the circle so that it fits easily into the Mason jar screw top lid (see picture #11).**
9. **Cut a slot in the cardboard so that the JST connectors can fit thru the lid (see pictures #12 and #13).**
